

Control of bulk and bagged goods from wheat contract through entire process

Safe Computing delivers Control of bulk and bagged goods throughout the system.

Sales ordering processes whether via EDI, telesales or entered manually are all catered for supporting fully flexible customer pricing structures, comprehensive price approval functionality, sales contract management and reporting and volume tracking management and reporting.

Also a full on-line ordering e-commerce system has previously been developed for one of our customers providing full pricing models and delivery rules support.

The conversion from bulk to bag via packing job or vice versa via “rip and tip” is fully catered for by the system.

It is possible to invert pallets in order to comply with customer product configuration requirements e.g. wooden or plastic pallets.

Wheat purchase contract management handles complexity of pricing calculations for both UK and imported wheat including:

- Price and delivery schedules
- Contract price breakdown to individual price elements
- Multiple currency handling
- Online capability for suppliers
- Delivery planning and vehicle bookings
- Vessel and vehicle receipts
- Self-billing
- Haulage costs

Management of wheatfeed contracts dealing with all options including bulk, pellets or mini-bulk.
