

# Fully integrated end-to-end business system

Safe Computing delivers a fully integrated end-to-end business system delivering efficiency from wheat to flour with no data re-entry required, supported by class-leading Safe Financials and Credit Control.

Safe Computing has a long established pedigree of providing high quality accounting software solutions for almost 25 years. Our market leading solution, Safe Financials, addresses all elements of commercial businesses requirements; including financial accounting, order processing and stock control with supporting management reporting, document management and web portals. Our service and support services ensure complete customer satisfaction from installation to live on-going operation.

Safe Computing software supports the business processes of our customers in the milling sector from the initial contracts to purchase raw materials right through the manufacturing process into the sales and distribution modules and on into the Management Accounts and BI modules. No data is re-keyed at any stage of the process and all data transfers are seamless and automated.

In summary, the Milling solution offers a single, fully integrated business system that will drive through efficient operating of the milling process, leading to:

- Elimination of manual processes
- Integration with third party systems
- Removing duplication
- Removing unnecessary paper
- Improving quality control
- Driving down costs
- Managing suppliers
- Empowering the users
