

## About Safe Computing

Safe Computing is a long established leading supplier of software solutions to businesses internationally. Although our solutions are widely deployed in many different business sectors we specialise in some key vertical markets including the milling sector. The technology we offer is completely modular and can be integrated to any number of third party solutions. We have a passion for the core markets we operate in and pride ourselves on the excellent and close customer relationships we have developed.

Safe Computing with a collective team of over 150 professionals in our six offices has over 200 installations and enviable customer retention. An almost non-existent staff turnover ensures continuity that has led to a stable, profitable business, every year since inception. As a privately owned and self-funded business, we have a commitment to growth whilst maintaining a healthy working environment and providing genuine value for money for our expanding and loyal client base.

ERP software for food production

## Top ten recipes for success

**Fully integrated end-to-end business system delivering clear and accurate real-time information across the entire business, establishing consistent processes based on good manufacturing practice from wheat to flour with no data re-entry required, supported by class-leading Safe Financials and Credit Control delivering improved cost per tonne management of both raw material and finished product.**

**Task driven powerful, scalable and flexible real-time warehouse management system that helps boost operator productivity, reduce costs, shorten order fulfillment times and increase customer-satisfaction by increasing picking rates and reducing errors.**

**Management of shelf-life throughout the solution taking into consideration raw materials, intermediate items and finished goods.**

**Seamless integration with weighbridge and production control systems from industry leaders such as Buhler, Avery or Precia-Molen ensures control of all vehicles and stock arriving and leaving site, allowing for control over Proof of Delivery, Collections, Returns, Split loads and also management and billing of your pallets held by customers.**

**Mill specific Laboratory Information Management solution including capture of wheat and flour analysis, such as moisture, wheat type, specific gravity, screening and also supporting the calculation of any claims due for non-conformance to contract.**

**Wheat purchase contract management handles complexity of pricing calculations for both UK and imported wheat including self-billing and haulage costs.**

**Lot controlled traceability backbone to track product from finished goods back to specific wheat intake or vice versa.**

**Control of bulk and bagged goods throughout the system including both sales and purchase ordering processes whether via EDI, telesales, entered manually, interfaced from third party system or via on-line ordering system, and if required management of conversion from bulk to bag via packing job or vice versa via "rip and tip".**

**Management of wheatfeed contracts dealing with all product format options including raw bulk, pellets or packed bags.**

**Distribution Management System (DMS) - recording and analysing journey and fleet costs.**
