

World-class Financials Management

Safe Financials is a modular, fully integrated, suite of applications. Functionality covers all aspects of your business systems requirements focusing on delivering world class financial management software available within a multi-company, multi-site and multi-currency structure if required.

Modules include:

- Sales, purchase and nominal ledgers
- Cash manager
- Commercials including purchase and sales order processing and stock control and inventory management
- Fixed assets
- Job costing
- Project and commitment accounting
- Warehouse management
- Credit control and query management
- Web portals
- Management reporting

Safe Financials focuses on generating tangible benefits for your business, cutting costs and improving financial control.

In combination with fast and accurate management information, strategic decisions may be made. These well informed decisions can help to create a more effective and profitable business.

By streamlining previously manual processes, integrating effectively with third party applications and minimising the use of paper within your business, the implementation of Safe Financials often results in a rapid return on investment.

End users find the product intuitive and are therefore more productive at an earlier stage when compared with other solutions in the market.
